

# HEAT PRINT WITHOUT LIMITS

## DECORATE MORE THAN CLOTHING

Heat print technology allows you to decorate many items. Hats, bags, and other accessories can be decorated with the right heat press equipment and accessories. Name badges and phone covers that have polyester resin coating can be decorated with sublimated transfers.

## DURABLE AND LONG-LASTING

Heat transfers are just as durable as screen printed or embroidered decorations. In fact, some heat transfer vinyl will outlive the life of the garment.

## CHOICES FOR TEXTURE AND COLOR

With options ranging from glitter and reflective materials, to full color photo-realistic digital prints, heat transfers are anything but flat or monochrome. Heat printing is great for mixed-media applications, as you can apply textured vinyl and screen printed transfers to the same garment.

## DECORATE APPAREL FOR ANY OCCASION

Heat printing continues to be used in decorating a wide variety of apparel. From performance wear to fashion wear to corporate wear – it all can be decorated with a heat press.

## HEAT PRESSES DO MORE THAN TRANSFERS

Heat presses aren't limited to transfers, either. They can be used to apply emblems and cure Direct-to-Garment prints. They are also used by embroiderers to flatten designs that roll or wave. And of course, they're perfect for getting wrinkles out of your garment.

## FROM SOFT AND THIN TO EXTREMELY DURABLE

Heat printing materials come in a wide range of thickness. From ultra-permanent sports names and numbers, to soft, barely-there decorations for fashion and performance wear – you can heat print it all.
